

## F5 VPN Setup Guide Windows 10

At the desktop open Internet Explorer. Once that is open navigate to vpn.olivet.edu

Once you have navigated to the page you will be presented with a login screen.

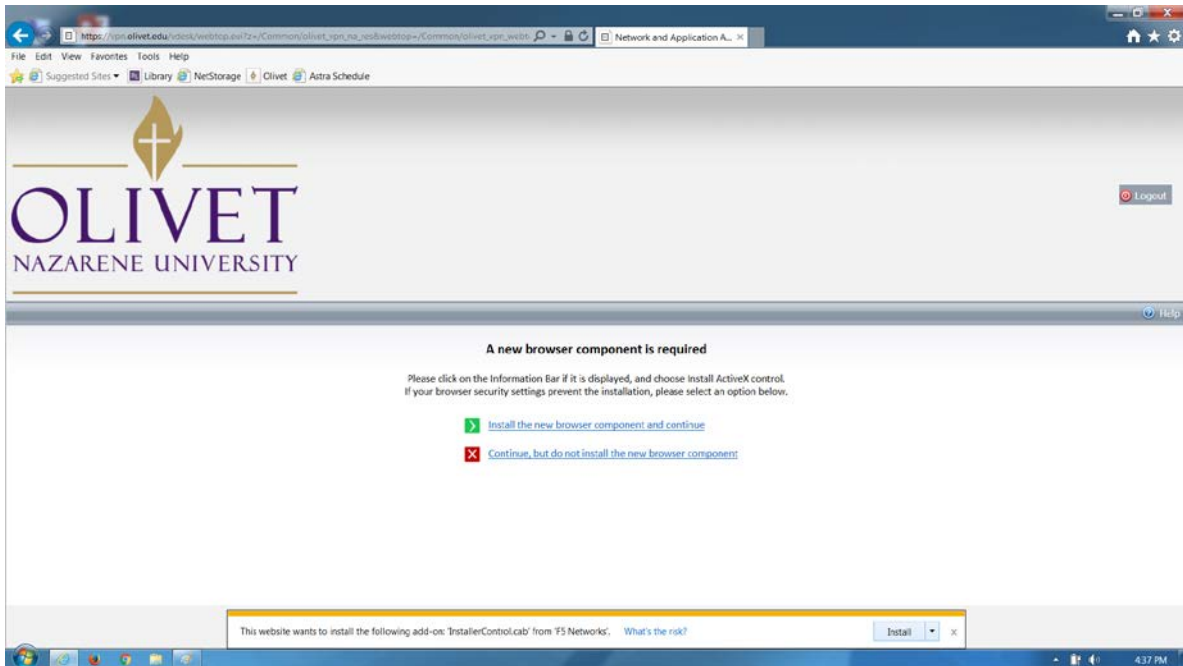

At the login screen enter your ONUnet Username (Everything before the @ symbol)

And the password you use to login to my.olivet.edu

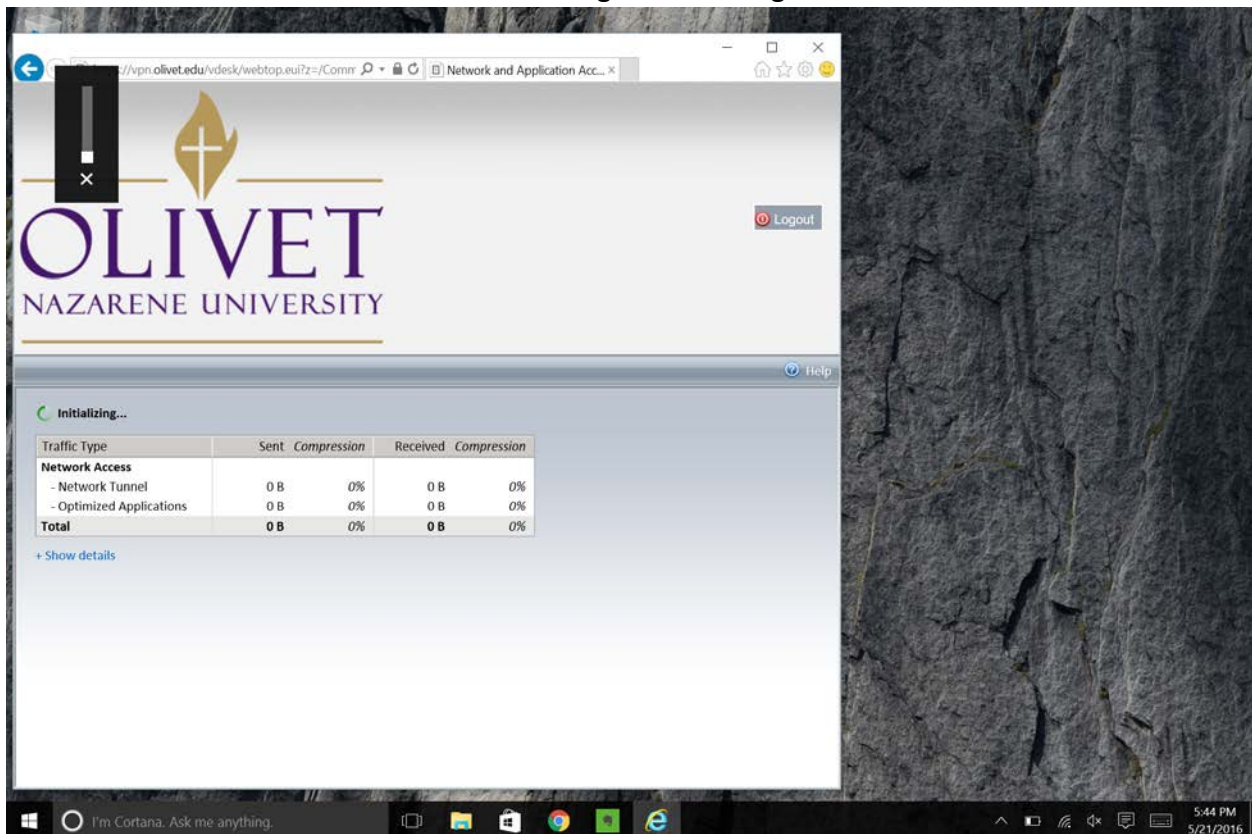

If the credentials are correct you will get a message saying you have been granted access

After clicking where directed it will present you with the option to install a plugin.

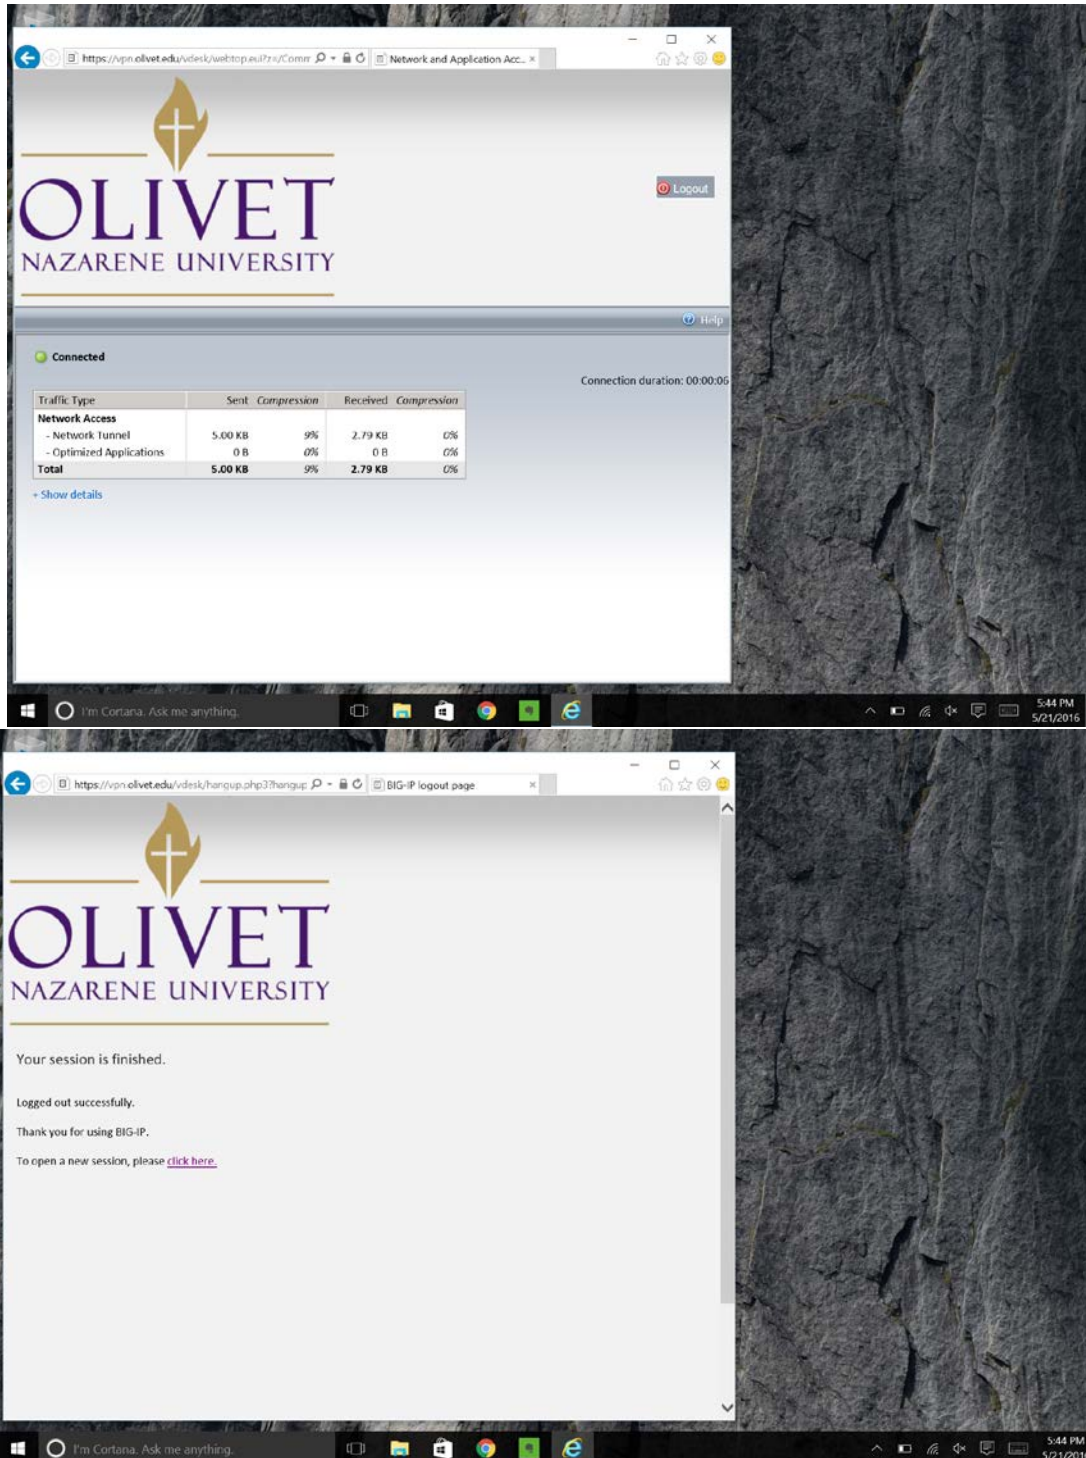

Be sure to install the plugin. There will be several security boxes that appear. If it has F5 on it click allow.

Once those boxes are done you should see a box similar to the image below that will say connecting or initializing.

Once that says connected you will be all set to go. You should be able to use remote desktop or access resources like colleague from off-campus. When you are finished click logout.

Upon subsequent connections from the same computer you will not need to install the plugin. You may have to allow the VPN to connect however.
